

## The Nuclear Renaissance

The nuclear industry is set for resurgence across the country and around the world. There are 104 nuclear reactors operating in the United States today, with the last unit coming on line in the early 1980s. In 2007 the nuclear industry submitted six license applications to the NRC for as many as 10 new nuclear reactors. In early 2010 President Obama pushed through a bill including over \$ 8 billion in loan guarantees for the industry. Vogtle Nuclear Plant in Georgia was the first to benefit from these guarantees. The build out for the new units will run for the next 10-20+ years. In order to become a qualified supplier to this growing market a company must have an NQA-1 or 10CFR50 Appendix B nuclear quality program established and implemented. Global Quality Assurance (GQA) has dedicated staff to develop and implement your nuclear quality program.

- Commercial Grade Dedication Program Development and Implementation
- Supplier Management
- Training
- Supplier Audits/Surveys
- Internal Audits
- FFD/AA Audits
- Supplier Oversight & Surveillance
- Technical Staff Augmentation

**"ABSOLUTELY THE BEST QA PROGRAM OVERVIEW I HAVE ATTENDED IN 30 YEARS OF NUCLEAR QUALITY ASSURANCE."**

**TIM P. TENNESSEE**

**"GLOBAL QUALITY ASSURANCE HAS ONCE AGAIN PROVEN TO BE A VERY PROFESSIONAL ORGANIZATION AND PARTNER IN MEETING OUR QUALITY GOALS"**

**SCOTT B. - ONTARIO**

**GLOBAL QUALITY ASSURANCE, INC. (GQA)** is considered a leader in the supply of QA auditors, technical specialists and support personnel. Our 50+ nuclear professionals have an average of 25 years of experience in the nuclear industry, with 15 of our senior level specialists having 30+ years of experience, including nuclear utility experience. Over the last 10 years of operations, our client responsiveness and supply of top quality professionals with strong industry knowledge has created long term partnerships with our clients.

GQA has extensive experience with setting up nuclear quality programs. To date we have developed or are in the process of developing and implementing more than 30 nuclear quality programs which comply with NQA-1 and 10CFR50 Appendix B. One of these specialists can come to your facility to perform a gap analysis to let you know what needs to be done to upgrade your program, including training, timeline and costs.
